

2023 Pasadena Audubon Christmas Bird Count: Feeder Watcher Data Sheet

Hello Feeder Watcher! Thanks for volunteering to be a yard watcher for the Pasadena Audubon Christmas Bird Count (CBC). Your efforts will help us get a more accurate census of the birds in our count circle on December 16th, 2023. The purpose of this sheet is to give you a few tips and hints on watching your yard, methods of watching, counting strategies and data return.

Two essential points of clarification: 1. Your yard must be within the Pasadena CBC circle. You can use the following Christmas Bird Count Map to confirm this:

<https://tinyurl.com/y5z8zust> Using the pull down menu choose ArcGIS World GeoCoding Service to the left of the search bar and type in your address in at the search bar to see if it falls inside the count circle. 2. You are to count birds ONLY on December 16th, 2023! The purpose of the Christmas Bird Count is to record birds within a pre-defined 15-mile diameter count circle in a 24-hour period.

There are two ways to count 1) You can watch your yard in a solid block - ideally starting in the morning or evening when birds are most active or 2) you can watch casually throughout the day.

The most important information that we MUST have is: 1) How long you watched for in total 2) The maximum number of an individual species that you had at one time. This means you aren't adding up and writing on the form the number of House Finches that you saw during the day but writing in the most that you could see at any one moment in time. 3) The number of people in your household counting.

Below I have created a form that will cover the most likely visitors to your yard. It may be that you have something less expected, so I have left room for you to write those species in. If something that you see during your count is rare for our area it may be that we need to contact you to clarify the identification, so please make sure to include your email.

Once you have completed you count and filled out your sheet, please send it to our Program Coordinator Jamie Cho at Pasadena Audubon jamiiec.pas@gmail.com Be sure to include your name, address, email address and time spent watching. PAS need to submit data by mid-January, so procrastinating may result in your efforts not being included in the national census.

Thanks again for helping out!

Luke Tiller, PAS President

Below are listed some of the common feeder birds that are often found in Pasadena. This is by no means a comprehensive list nor does it include things like gulls, ducks, and other birds that might fly by your yard. Feel free to supplement this by using the additional spaces.

Names of Counters: _____

Number of Counters: _____ PAS members? Y/N Time counting in hours: _____

Your Address: _____
